

VALENTINE CODING

Use code to help collect the hearts to fill the jar! Left, right, up, and down arrows are used in algorithms. Algorithms are a series of actions or a sequence of actions strung together to solve a problem.

Directional Arrows

Draw the arrows on the mat to create the shortest route to gather all of the hearts to fill the jar.

Start on the X!

1. What is the route with the least amount of moves?

2. What did you learn about coding?

Make Your Own Game!

Draw an X in a starting square. Next, draw a jar in a square to signify the end of the game. Then, add 2-3 hearts or use heart stickers in various squares to collect. Play your game!
