

# BEAK BUFFET

Birds have an incredible variety of beaks, each shaped perfectly for their way of life. From the long, slender beak of a hummingbird designed for sipping nectar to the strong, hooked beak of a hawk used for tearing into prey, these beaks are like multitools.

Some, like the parrot's beak, are great for cracking tough nuts, while the flamingo's beak filters food from the water. The shape, size, and strength of a bird's beak tell a story about what it eats and how it lives, showcasing nature's perfect adaptation for survival.

## Activity: Beak Buffet Activity

Duration: Approximately 30–45 minutes

Materials Needed:

Tools: Tweezers, tongs, chopsticks, straw, eye dropper, toothpick, etc

Foods: Nuts, dried fruit, marshmallows, crackers, etc

Activity: Set up a "beak buffet" with various items. Assign each type of food to a specific beak shape (tweezers, tongs, chopsticks, etc.). Kids can use the appropriate "beak" tool to pick up each food item, simulating how birds feed based on their beak adaptations.

Benefit: Explores the various types and functions of bird beaks, as well as provides a hands on game that encourages tactile and visual exploration.
